

Integrated Vacuum Shuttle Feeder

For Printing & Inspecting

Feed Flat Cartons & Blisters

The Integrated Vacuum Shuttle Feeder is ideal for feeding flat cartons, blister cards, Tyvek bags/sheets and credit cards. Products are manually loaded into the infeed magazine and upon actuation a vacuum shoe feeds the cartons onto an independently controlled vacuum belt drive. This motion provides highly accurate and constant motion for the highest of print quality. The Integrated Vacuum Shuttle Feeder can be equipped with most printers, label applicators or vision inspection systems.

Options:

- Shingling outfeed conveyor
- Inkjet or Laser printer
- Label applicators
- Vision inspection system
- Thermal transfer system
- Shaft encoder
- Reject station

Power Requirements: 220 V AC single phase supply; 2.0 kW loading

Throughput: 100-300 cartons / minute

Size Range: Length 5-17 in.; Width 3.5-14 in.; Thickness .25 inch
