## TR-1000 Case Feeder

### TECHNICAL SPECIFICATION

**OVERVIEW:** The Travtec TR-1000 Case Feeder is designed for use in conjunction with inkjet printers, labelers, print / apply systems and verification equipment. It is a stand alone system with full mobility for ease of location. Standard mounting bracketry enables simple installation and the easily loaded magazine with rapid size adjustment highlights the user friendliness.

Cases are loaded into the angled magazine with the front edge facing forward, upon actuation a reciprocating pusher arm feeds the leading case into a high-grip belt drive unit giving access to all four faces in one pass. This provides a highly accurate and constant motion past the applicator/s ensuring high quality print or label application without vibration, with impulse head inkjet applications an optional shaft encoder ensures correct print pitch at all speeds.

The systems comes complete with mounting bracketry for applicator / printer, electrical-pneumatic control panel PLC controller, castors, fully adjustable magazine, jam detect sensor and built in case counter.

**CONSTRUCTION:** Mild steel framework with high quality powder coated painted finish including covers and guarding. Heavy duty air cylinder with integral bearing slide with quick change slide bar, high-grip drive belt assembly with spring loaded back up assembly.

### POWER REQUIREMENTS:

110 / 220 / 240 / V AC single phase supply;  
2.0 KW loading

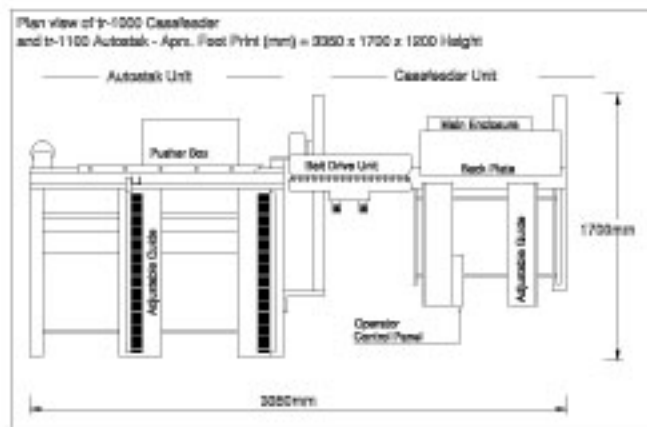

### THROUGHPUT:

Up to 40 cases/minute depending on size

### SIZE RANGE:

Length 250-1000mm; Width 150-750mm;  
Thickness 3-10mm
